

As simple
as an ATM

Do you know how many processes are triggered off when you introduce a **card** into an **ATM**, in order to, in a few seconds, obtain your money and all this, 24 hours a day?

CEFICARG is not an automatic handling system for truck loading, it is rather a **complete system of raw material and expedition management that is integrated with the sales and invoicing modules of the ERP** of the company, **manages** the relationship with the transport subcontractors, **assures** that the **loading process** meets the quality standards, **watches** the compliance of traffic norms when preparing delivery notes, **integrates the video and IP telephony system** for surveillance and help of transporters... Right from the moment when the commercial agent introduces sales data in the ERP, CEFICARG stays in charge of the whole process, up to the point when the transporter receives the delivery note.

CEFICARG is specially oriented to cement, oil, raw materials and food companies and, in general, any company that has to deal with big expedition volumes.
