

All infrastructures under control

CEFINET is the system that enables to **integrate the supervision of big control rooms and mobile telephony station infrastructures**, no matter what their technologies are.

The system enables the supervision of:

- Alarm terminal blocks
- AC Low Voltage Distribution Boards (Schneider, Alstom, Siemens, ABB, GEFanuc, ...)
- UPS (Merlin Gerin, Enerdata, Cener, Saft,....)
- Diesel Generators
- AC Power Analyzers (Schneider, Alstom, ABB, Siemens, Satec, Circutor,...)
- DC Power Converters (Lucent, Emerson,...)
- DC Power Supply Distribution Boards (Lucent, Emerson,...)
- Air Conditioning Systems (Hiros, Carrier,...)
- Fire Detection Systems (Notifier, Cerberus,...)
- Antiintrusion Systems and IP Cameras
- Ambient humidity and temperature measure.
- Digital signals
- Analog signals

CEFINET is integrated into the customer's maintenance management system or ERP. It can register the real starting and ending time of a task in the work order file.
